

MultiAutoject®

1. Remove the end cap.

2. Attach a pen needle and remove the protective cap.

3. Pull the green button backwards until a click is heard.

4. Place device against the injection site and press the side mounted activation buttons. This will automatically insert the needle and inject the drug. When the red plunger moves to the next dose marking the injection is complete.

After injection of the final dose from the cartridge, safely dispose of the device.
