

Our Environmental Policy Statement

Owen Mumford, as a leading designer and manufacturer of medical devices and disposables used by healthcare professionals and consumers worldwide, is committed to achieving the highest standards in all areas of our business. The implementation of an Environmental management system that meets the requirements of ISO 14001 is integral to this commitment.

Our primary objective is to operate so as to minimise any adverse environmental impact at a global and local level. To reduce the potential for pollution and to protect the environment, we will operate in a manner, and use technologies that are the best practicable environmental options. We will pay particular attention to any impact our activities may have on the local communities.

We aim to comply with all legal requirements as a minimum and to continually enhance environmental performance by:

- setting annual objectives and management programmes alongside other business objectives,
- training and consulting with our associates,
- identifying and assessing significant impacts in order to identify appropriate preventative and protective control measures,
- reviewing this policy, on an annual basis,
- provision of suitable and sufficient environmental information, instruction and training to enable all associates to perform their jobs competently,
- selection and monitoring of competent suppliers to ensure appropriate standards of environmental management are maintained,
- providing adequate and appropriate resources to implement this policy; and
- ensuring the policy is communicated to all persons working for and on behalf of the company, and is made available to the public.

Environmental management, and involvement in the achievement of environmental objectives, is a responsibility of all associates and a primary responsibility of all levels of management.

My aim, and those of the Executive Team, is to encourage initiative and best practice in a culture where Associates and Managers are aware of their individual responsibilities for the environment and are actively engaged and committed to improving standards of environmental management.

Jarl Severn
Managing Director
