Gentle  
self treatment  
for women after  
pelvic radiotherapy

**Amielle**  
Care  
Vaginal dilators

[owenmumford.com](http://owenmumford.com)

# Amielle Care

Vaginal dilators

Following radiotherapy to the vagina, cervix or pelvis, a woman may experience some internal scarring (adhesions) to the treated area, which can make the vagina narrower, drier and less elastic. Preventing the formation of scar tissue within the vagina helps ensure that it remains supple so that sexual intercourse and vaginal examinations can be performed without discomfort or pain.

## Effective home treatment.

**Amielle Care** vaginal dilators offer an effective way to prevent potential post radiotherapy issues in the privacy and comfort of your home. Used for 5 – 10 minutes, 3 – 4 times a week indefinitely or as recommended by your doctor, the treatment is simple and safe.

## Self treatment at a pace that suits you.

Four graduated sizes allow you to progress in your treatment at your own pace. A smooth surface and a handle make insertion and removal easier.

9 x 2cm (3½ x ¾")

11 x 2.5cm (4¼ x 1")

12.5 x 2.8cm (5 x 1¼")

14 x 3cm (5½ x 1¼")

Lubricant

Twist-and-lock universal handle

## Designed to help you build your confidence.

Developed in conjunction with The UK National Forum of Gynaecological Oncology Nurses, **Amielle Care** helps you to build your confidence. Sexual intercourse can also help prevent the formation of scar tissue, but it is not an alternative to using your vaginal dilators. It is important to preserve the intimacy of sexual intercourse.
