Autoject® 2 is a registered trademark of Owen Mumford Limited. All other trademarks are the property of their respective owners.
Autoject 2 automates the process of self-injection. At the touch of a button Autoject 2 injects the needle to a pre-set depth and delivers the contents of the syringe.

There are two standard Autoject 2 models:
1. For patients using fixed needle syringes.
2. For patients using removable needle syringes.

Each Autoject 2 comes in a handy zipped soft pouch that includes:
- 1 Autoject 2
- 2 depth adjusters (FIXED NEEDLE)
- 1 depth adjuster (REMOVABLE NEEDLE)
- a yellow primer/depth guide
- instructions for use

**COMFORT**
Nobody likes injections, so for people who have to inject, comfort is vital. The Autoject 2 range offers easy to handle devices for quick injections to reduce discomfort.

**CONFIDENCE**
Many people choose Autoject 2 because they are concerned by injections, and particularly injecting themselves. Autoject 2 offers a perfect solution by concealing the needle from the patient’s view prior to injection.
